Integrating a Zoho Creator application with another Zoho service using connections and APIs

Job Application Form — Basic Fields Use Case

Vasanth P

1. Aim

To integrate a Zoho Creator application with Zoho CRM using a microservice connection, a form workflow, and Deluge scripting, so that the details submitted through a Creator form are created automatically as a Lead record in Zoho CRM.

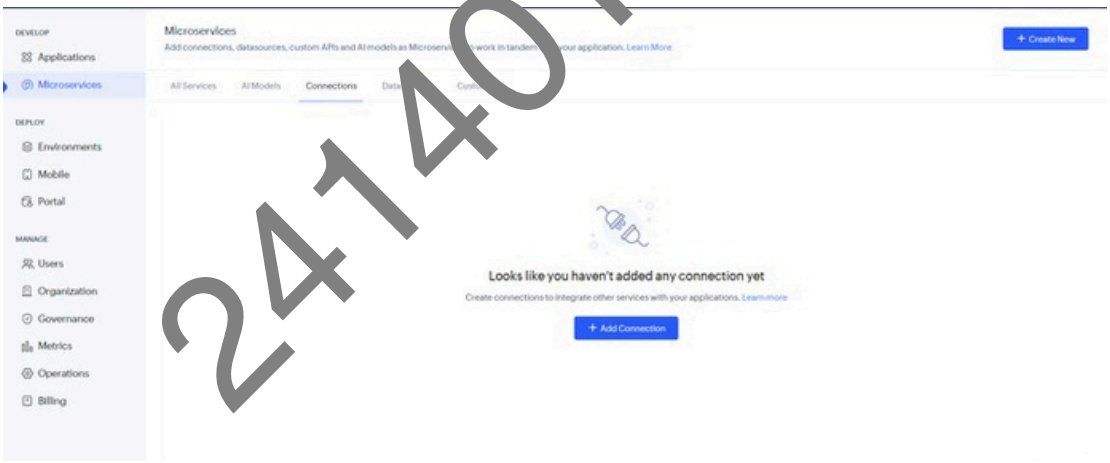

2. Procedure

PhaseA:Creating the Zoho CRM Connection

1 Log in to your Zoho Creator developer account and open the Vehicle Service Request Dashboard application.

2 In the left navigation panel under the Develop section, click ***Microservices*** to access the centralized integration environment.

3 Open the ***Connections*** tab. Since no connections exists yet, the page shows “Looks like you haven't added any connection yet”. Click ***Add Connection***.

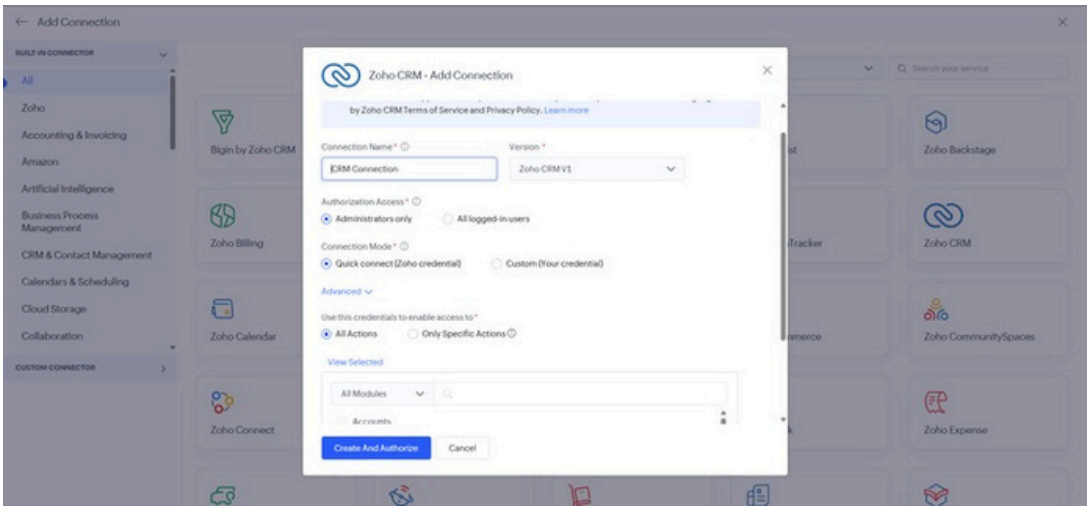

The Microservices page with the Connections tab selected and no connections added yet; the Add Connection button is used to start.

4 From the Built-in Connector list, select ***Zoho CRM***. In the Zoho CRM – Add Connection dialog, enter the Connection Name (CRM Connection) and keep the Version as Zoho CRM V1.

5 Set Authorization Access to ***Administrators only***, Connection Mode to ***Quick connect (Zoho credential)***, and enable access to ***AllActions*** .Click ***Create And Authorize***.

241401125

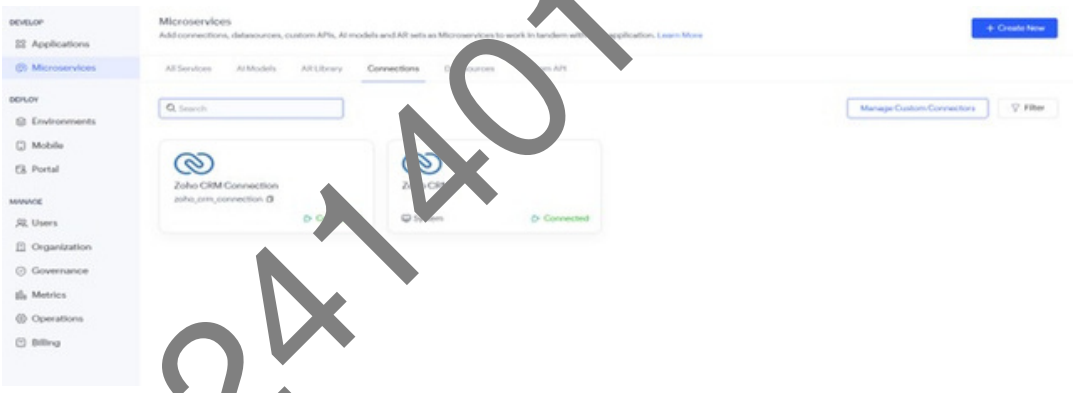

The Zoho CRM – Add Connection dialog with Authorization Access set to Administrators only, Connection Mode set to Quick connect (Zoho credential), and access enabled for All Actions, followed by Create And Authorize.

Phase B: Verifying the Connection and Application References

6 After authorization, return to Microservices > Connections and confirm that the Zoho CRM Connection card appears with the link name zoho_crm_connection and a green ***Connected*** status.

7 Click the Zoho CRM Connection asset to open its settings. Inspect the permissions granted to the connection and confirm that the Vehicle Service Request Dashboard application is switched ***On*** under Connection Access.

The Connections tab listing Zoho CRM Connection (link name zoho_crm_connection) and the system Zoho CRM connector, both showing the Connected status.

Phase C: Setting Up the Form Workflow

8 Navigate back to the application, select the form that submits the request (Admission Enquiry Form), and click the ***Workflow*** tab in the top header.

9 Create a new form workflow that executes on ***Created > Successful form submission***.

10 Inthe Add New Action panel, set ***Run this action*** to ***Always***, sothateverysuccessfulsubmission is sent to Zoho CRM, and choose ***Deluge script*** fromtheActiontypegrid.

Phase D: Compiling the Deluge Script Code

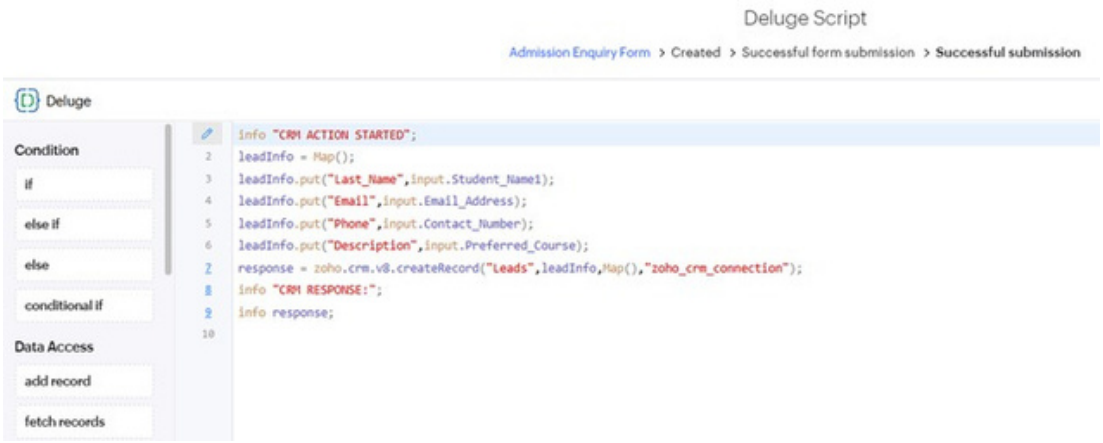

11 In the Deluge editor, initialize a map named leadInfo and map the form fields to the Zoho CRM Lead fields: Student_Name1 to Last_Name, Email_Address to Email, Contact_Number to Phone, and Preferred_Course to Description.

12 `Call zoho.crm.v8.createRecord("Leads", leadInfo, Map(), "zoho_crm_connection") to` create the Lead record through the connection link name, and store the result in response.

13 Use info statements to trace the start of the CRM action and the response returned by Zoho CRM.

14 Click ***Save*** to run the compiler validation and save the script.

241401125

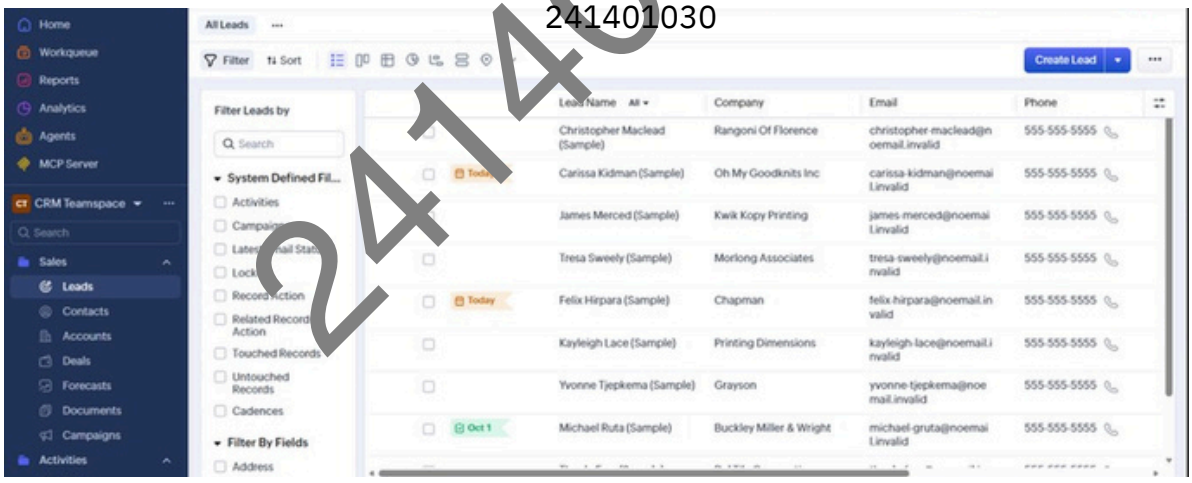

The Deluge Script editor for the workflow (Admission Enquiry Form > Created > Successful form submission > Successful submission). The script builds the leadInfo map, calls zoho.crm.v8.createRecord for the Leads module using the connection zoho_crm_connection, and traces the response using info.

3. Output & System Verification

The integration between the Creatorapplication and Zoho CRM was set up through a microservice connection and a Deluge workflow. As seen in the Microservices interface, the Zoho CRM connection is established and available.

- ***Connection Diagnostic Result:*** Connected (Green Status Verified)
- ***Operational Availability:*** The connection link name zoho_crm_connection is referenced in the form workflow script.
- ***Target Module:*** Records created by the workflow are added to the Leads module of Zoho CRM, shown below.

The Zoho CRM Leads module, the destination module for records created by the createRecord call in the workflow.

4. Conclusion

Thelabexercisedemonstrates how to connect a low-code application to another Zoho service using microservices, form workflows, and custom Deluge scripting. By linking the form submission to the zoho_crm_connection connection, the Vehicle Service Request Dashboard project establishes a working proof-of-concept in which submitted details are pushed automatically into Zoho CRM as Leads.
